Patient Consent for Electronic Prescribing

Greenbrier Physicians Clinic has implemented e-prescribing as an ongoing effort to improve your healthcare.

By eliminating paper, e-prescribing creates a more efficient and safer process for patients. This electronic process helps to prevent, and in some cases eliminate, the top reasons for prescription errors – including illegible hand-writing, incorrect dosing, and missed drug/allergy reactions – which improves patient safety and helps to control ever increasing medication costs due to medication errors.

With your consent your healthcare provider can electronically access information regarding your drug benefit coverage and medication history.

By signing and dating below I give authorization to communicate with my pharmacy for the period-indefinite (lifetime).

Patient Name (Please Print) _____

Patient Signature _____

Date _____
